

EVIDENCE BASED  
EDUCATIONAL CONSULTING

# For Information

## ***Big Thinkers High Achievers-The Power of Effective Questioning in the Classroom*** **Professional Learning**

Evidence Based Educational Consulting is offering the following in school workshop for school leaders and teachers.

### ***Big Thinkers High Achievers- The Power of Effective Questioning in the Classroom***

*'I used to think I asked good questions, now I think the questions my students want answered are their own' – Teacher 2012.*

1. What is your hunch about the power of questioning?
2. How do we, through questioning, have conversations with our students about their learning?

High quality questioning **by** students **of** teachers is a critical component of student educational achievement.

This full day workshop will help teachers to understand and implement effective questioning in their classrooms. Teachers will work in small groups engaging in discussions, completing group tasks, reading, responding and sharing information with each other. Teachers will be left with a real understanding about how the way they are working during the session can be implemented into their own teaching easily and with real benefits for their students.

Teachers won't hear talk from the facilitator about how to use effective questions, they will learn by doing it themselves.

To register your interest and set a date for an Evidence Based Educational Consultant to run this workshop at your school.
