For Information

10 November 2012

Classroom Observation and Coaching- Train the Trainer Professional Learning

Evidence Based Educational Consulting is offering the following workshop for prospective coaches on staff at your school.

Evidence-Based Classroom Observation and Coaching

The workshop will teach participants how to use the Evidence Based Observation APP which uses a time sample analysis process to collect objective data for coaching purposes. It will be necessary for participants to have an iPad for training purposes. Participants will be given limited access to the APP for the purposes of training during the workshop.

The data is used as the basis of effective coaching conversations. Participants will have the opportunity to learn and practice basic instructional and facilitative coaching techniques in order to assist teachers to make sense of what is happening in their classrooms as identified by the evidence.

Participants will engage in the thinking around the implementation of the Evidence Based Observation and Coaching process at their school. The workshop will also explore the use of data collation in order to inform whole school professional development directions.

Schools who send participants to this workshop can expect to receive ongoing training and support in both use of the APP and implementation.
